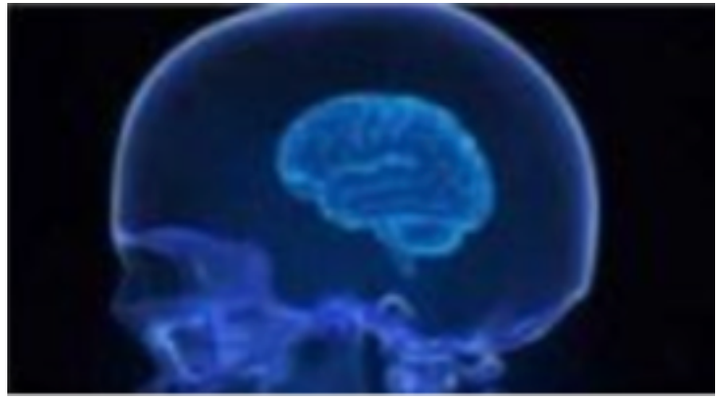
useQuery<any>(QUERY)



Redeclaring types manually

CountryList.tsx X

```tsx
import { gql, useQuery } from '@apollo/client';
import { Loader, ErrorScreen, CountryCard } from './components';

const COUNTRY_LIST = gql`
  query CountryList {
    Execute Query
    countries: Country {
      _id
      name
      subregion {
        _id
        name
      }
    }
  }
`;

type CountryList = {
  countries: {
    _id: string;
    name: string;
    subregion: {
      _id: string;
      name: string;
    };
  }[];
};

const CountriesPage: React.FC = () => {
  const { data, loading, error } = useQuery<CountryList>(COUNTRY_LIST);

  if (loading) {
    return <Loader />;
  }

  if (error) {
```
